Your guide to reports and tools

A practical guide to finding reports, using table controls, and completing common office tasks.

01 Choose where to start

- Use the GPC, TKG, or GSN portal card for business-specific reports.
- Use Reports & tools to open shared Stock reports, Ornament purity pages, or Office tools.

02 Run a report

- Open the report and review its filters and column headings.
- Set the filters you need, then use the page action to display matching records.
- When no filters are selected, some pages show all available records.

03 Read and navigate the table

- Search narrows the displayed rows. Column headings may sort the results.
- Use the page-size selector and Previous / Next controls to browse larger result sets.
- Use Excel, CSV, PDF, or Print controls when provided on that report.

> **Tip: Each report can have its own filters and controls. Follow the labels shown on that page.**

Stock reports and purity

Use these pages to review inventory, sales, and ornament purity information.

04 Stock reports

- Choose a business portal or a shared stock report from the home page.
- Where available, select date, product, supplier, or other filters before viewing results.
- Search and sort the table to locate records; export or print when those actions are available.

05 Ornament Wastage Master

- Use the page to review wastage reference entries.
- Add New Wastage opens the entry form. Complete the required fields and save.
- Use the row actions to edit or delete an entry when available. Check the selected row before making changes.

06 Ornament Purity Form & Report

- Open the form to enter purity information and the report to review saved records.
- Use the form labels and on-screen validation messages to complete each entry.
- Apply report filters and use table controls to find or export the records you need.

Before saving changes, review the designer, product, ornament, weight range, and wastage values.

Office tools

The Office tools group contains timesheet and estimate entry and reporting pages.

07 Employee timesheet

- Open Employee - Time Sheet Management to add a time or leave entry.
- Check the employee, date, and time or leave details before saving.
- The form may validate time ranges and prevent entries beyond the current date and time.

08 Admin timesheet

- Open Admin - Time Sheet Management to review existing entries.
- Use the available filters to find records. Select the correct row before editing or deleting it.
- Review the displayed totals and row details after changes.

09 Gold and Silver estimates

- Use the matching form to enter an estimate and the matching report to review records.
- Use From Date / From Time and To Date / To Time to set the reporting window.
- The totals on the report are calculated from the rows currently displayed by its filters.

Estimate reporting uses a business-day window from 7:00 PM to 7:00 PM. Set both date and time boundaries for the intended period.

Helpful habits

A few simple checks make report review and data entry more reliable.

10 When entering or editing data

- Confirm the selected record and review all values before saving.
- Use the form controls and validation messages; avoid entering values in a different format.
- For deletes, verify that the row is the one you intend to remove.

11 When totals look unexpected

- Check the active date/time filters and any search term.
- Confirm whether the table shows all rows or only a filtered subset.
- Clear filters or search and compare the table and totals again.

12 When a page shows an error

- Note the page name, the action you took, and the complete error message.
- Share those details with the system administrator so the issue can be traced.

> **This guide covers common workflows. The fields and actions shown on the report page are the source of truth for that page.**
